Database: MySQL, MongoDB, SQL

Other: Heroku, Git

PROJECTS

Ticket-Desk - [GITHUB](#)

Ticket system application built with the MERN stack that allows teams to manage bugs, requests, and other support tickets.

- Application is a fully working ticketing system that allows users to register, log in on their account, "CRUD" tickets stored in the database, display tickets assigned to their account, and mark them based on the priority.
- Tools used: HTML5, CSS3, JavaScript, jQuery, Node.js, Express.js, React, React-router, Redux, Axios, Material-UI, MongoDB.

Meta-Book - [LIVE](#) / [GITHUB](#)

Full-stack Astrology based web app that allows users to look up their zodiac traits and tarot card of the day.

- A user begins by inputting their name and zodiac sign. Then, they receive a brief message specific to their zodiac as well as traits such as birthstone and planet.
- Tools used: Node.JS, Express, MySQL, Sequelize, Passport, HTML5, CSS, Materialize, Javascript, jQuery, Handlebars, third party API.

Your City Guide - [LIVE](#) / [GITHUB](#)

YOUR CITY GUIDE is an application that assists the user in finding local events and dining options.

- When the user selects a city from the drop-down, they are then able to filter the type of entertainment (music, sports, or art) that they are seeking, as well as select an option for local restaurants.
 - Tools used: HTML5, CSS3, JavaScript, jQuery, TicketMaster API, OpenTable API.
-
